Design Patterns in a Web Application Prototype

9/21/2026

Question	Your answer
At exactly which line is it guaranteed that only one instance exists?	Line 9 in route.ts
What would happen if the constructor were public?	The instance would be repeating again and again, causing a saturation in the server.
Name a case in your own project where you would use Singleton.	In the shopping cart, because we are making just an unique instance through the session to exclude make more independent carts.

Question	Your answer
Which file(s) correspond to each layer (M / V / C)?	M: Task.ts V: layout.ts C: TaskController.ts
What would happen if TaskList.tsx fetched directly?	The view would assume tasks that are not pare of it, also can break the mvc flow and the code its going to be more difficult to maintain.
Name a case in your own project where you would use MVC.	Products again, because the model manages the data, controller coordinates the events and view show the information to the user.

Question	Your answer
Which line decides which concrete class is instantiated?	Line 56 in notification.ts
What would you need to change to add a WhatsApp channel?	Just add a new class and add it to the switch case
Name a case in your own project where you would use Factory.	Creation of products according to a category, 'cause allow centralize the creation of different product types and split the logic of creation within the rest of the app.
